
Research Scientist

Equally SA, specialized in Biotechnology, is looking for a **PhD Research Scientist**

Location

Brussels Life Science Incubator, Clos Chapelle-aux-Champs 30, 1200 Brussels (UCL campus)

Employment contract Full-time, immediate commitment

Context

Equally, startup in biotechnology, is offering a scientist position to help developing research projects in the field of immunology by combining various disciplines, from flow cytometry, molecular biology, to cell culture, laboratory animal handling, in silico analysis and genomics. Equally is firmly driven by innovation and clinical applications of such innovation, with a particular interest in diseases for which there is an urgent request for therapeutic solutions.

Project

The projects followed by Equally share a common denominator, which is the development of new therapeutic tools from an innate, but specific T cell population, the natural killer T (NKT) cells. Our projects focus on the improvement of therapeutic proteins/biologicals by removing their immunogenicity, and the development of novel vaccination methods activating specific NKT cells for treating infectious diseases and cancers.

Job function

The job lies at the crossing of different disciplines alluded to above, implying sufficient knowledge in several of such fields. As a scientist, you are able to independently design experiments, plan and organize daily work of technicians/research assistants, provide them technical guidance and experimental assistance when required, analyze data, prepare reports and present results in scientific discussions and meetings. As part of a startup biotech, you are able to implement and develop new techniques, identify new collaborations and adapt to new orientations.

Your qualifications

PhD in immunology, biotechnology or biomedical science. Passionate about science and research, enthusiast, detail-oriented, patient and reliable, with a strong team spirit. An acquired postdoc level experience in an academic or biotech/pharma R&D department is preferable. You should be fluent in English and preferably certified or prepared for laboratory animal handling.

Proposal

Equally offers a collaboration, within a young startup, in a dynamic environment, for a team work on innovating projects orientated towards the resolution of major ethical issues. An attractive contract with extra-legal advantages and including a possibility for additional training is part of the deal.

Why should you join us?

If you are ambitious, dynamic, convivial and ready to roll your sleeves up, and if you wish to embark on a social mission, this job is carved for you.

Interested in joining us? Please send your CV and cover letter to info@equally.be
